

# TIMER PRO

---

w e b   s e r v i c e s

Securely Distribute Timer Pro's Digital Standard Work  
to Anyone, Anywhere, Anytime, on Any Device

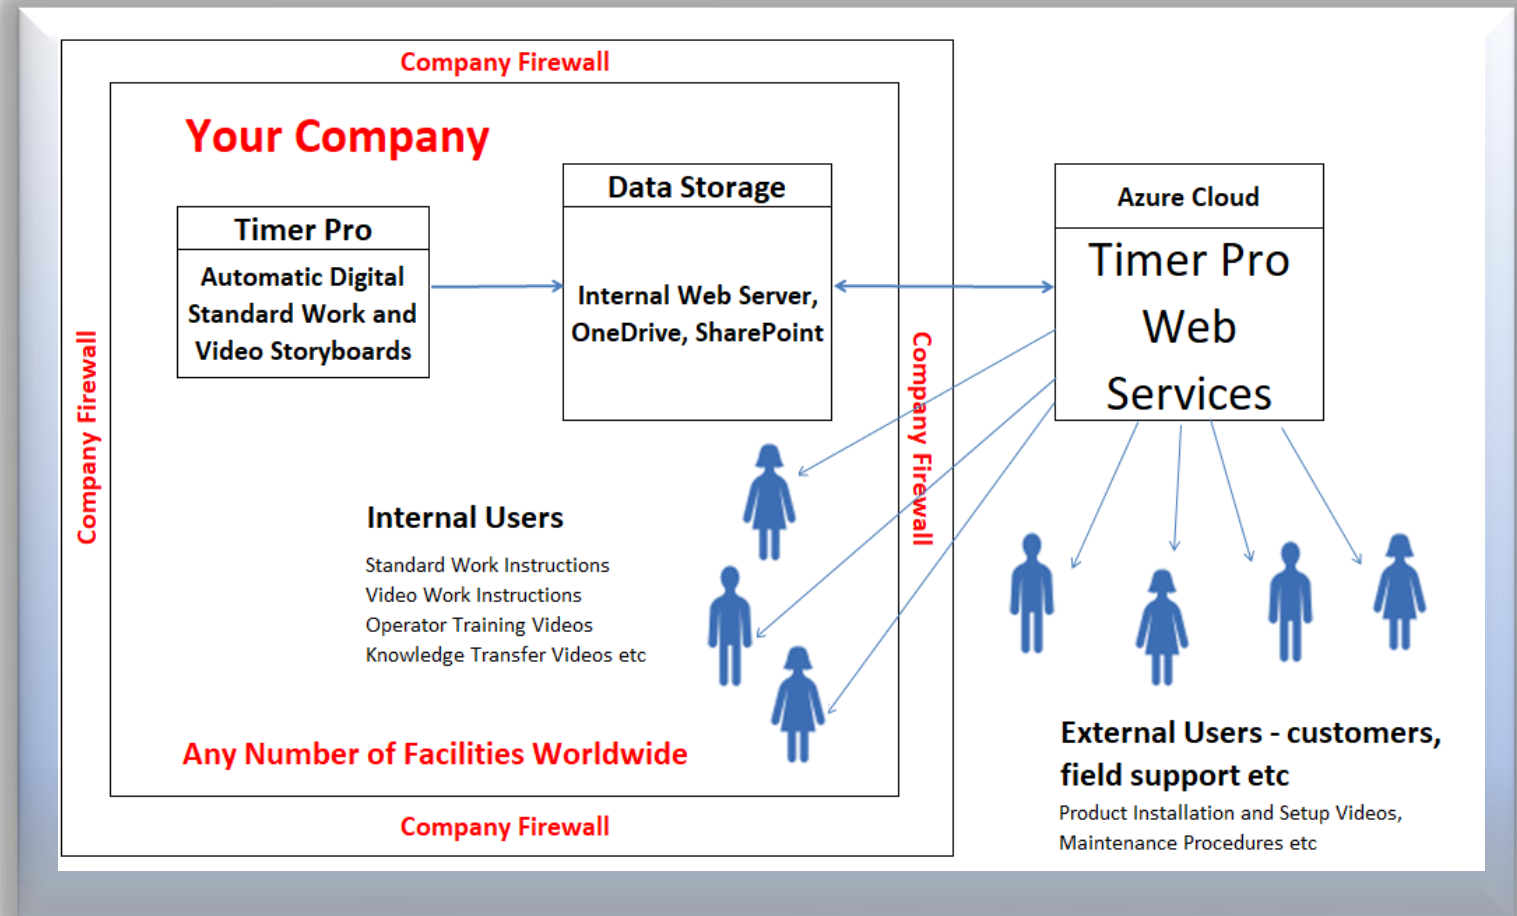

# Timer Pro Web Services Cost Effectively Distributes High Quality Digital Content to Internal and External Users

- Work Instructions
- Operator Training
- Field and Maintenance Staff
- Customer Support

All from behind the security of your company firewall.

# Automated Industry 4.0 Digital Content Creation

- Standard Work is created by users from Video Time Study, Process Analysis or Line and Cell Balancing.
- At the same time, Timer Pro automatically digitizes the content. No user effort is required.
- Additional digital content can be created from within Excel using the integrated Storyboard module.
- Timer Pro Web Services streams the Digital Standard Work and Video Storyboards to end users anywhere.

# Digital Standard Work

## End User Experience

### Access Anytime from Any Browser on Any Device

Timer Pro Web Services allow users to securely navigate your digital standard work libraries.

Double tapping on any activity on the digitized work instruction locates and plays the selected work content. Multiple steps can also be streamed.

# Timer Pro Storyboards: Clients Report **90%+** Time Savings to Develop Process Video Content

Before Storyboards, it took a client 80 hours to develop 10-minute training videos using traditional video editing software.

Now, using Storyboards, the same 10-minute videos are created and ready for distribution in only 3 hours.

# Timer Pro Storyboards are Developed Directly from Excel

- Each Storyboard is a collection of individual videos representing the sequence of work required to perform a specific task.
- Video content and captions from Timer Pro is automatically merged into the Excel Storyboard.
- Audio, supporting instructions, graphics and hyperlinks to any type of document can all be added using your existing Excel skills.
- A Publish Option in Timer Pro creates the Video Storyboard.

Absolutely no video creation or editing experience is needed.

*Your Storyboards are ready for distribution to any device via Timer Pro Web Services*

A close-up photograph of a person's hand holding a silver wrench, working on a car engine. The engine is made of various metal parts, including pipes, hoses, and bolts. The background is slightly blurred, focusing attention on the hand and the wrench. A semi-transparent circular overlay is positioned on the left side of the image, containing text and a button.

## Easily Share Your Digital Content

- Digital Standard Work can be shared for an entire process, individual process steps and even a specific activity by a unique URL that can be shared with end users anywhere.
- With a single click, the end user connects with the Timer Pro Web Services and the content will be instantly streamed to their device.
- URLs can also be incorporated directly into existing ERP, MES, Electronic Work Instructions packages, Learning Management Systems, etc.

# The Technical Information

Your IT group will access Timer Pro Web Services on the Internet by entering your Timer Pro registration key. They configure the Timer Pro Web Services connection to your data behind your company firewall. Absolutely none of your data can be copied, edited or deleted. Your data is completely secure.

Timer Pro Web Services provides the navigation platform to present your data for review only to end users to whom you have granted access. The content can be viewed on any device with browser capability anywhere at anytime.

# True Point of View Video Content

Use Smart Glasses to record the true operator point of view of any job. Use Timer Pro to isolate the work content and create digital content. Timer Pro Web Services will stream the resulting content to your end users.
